About the development of the BP-logo

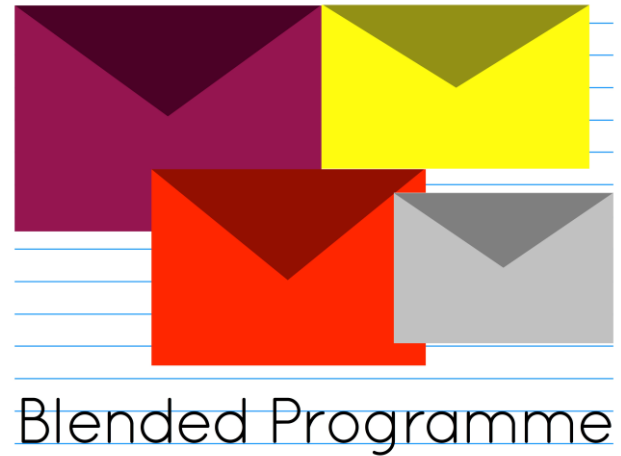

The main issue in many EU-projects is to express ourselves with specific logo of the project. This should of course represent the main idea of the project, but also include somehow all member states' personalities.

From the very first beginning it was very clear to all members, that BP should have an own logo, and it has to be developed by our students. The catch was taken by our FI and NL partners, and the development work was done during the first 3 months of the project, at the same time while our web page was under construction.

After several drafts and modifications BP-steering board made a decision in PM2 in Carlow. The main criterion for selection of our existing BP-logo was that it represents superbly all three countries (NL, IE and FI) by the colors of the letters. In addition, the greetings in three language reflects the situation when our students get blended during our mobilities.

The current logo is produced in Sataedu Nakkila unit, where our Graphic Designers and Audio-Visual students are studying their EQF4 level VET. Here are two first models of the final version and in the page 2 the other work models during the process.
